

Lab 5

Sol Ben-Ishay

1. No methods required. Please write all code inside the main method of the class StudentIO. You will ask the user number of students to be processed. Then for each student ask the student's age, gpa, id, year and the number of credits he/she enrolled for this semester. Then you will write a small report about each student. Use *Scanner* class for reading input. *Scanner* class can be used by importing *java.util.Scanner*. You may refer to Scanner documentation:

<https://docs.oracle.com/en/java/javase/11/docs/api/java.base/java/util/Scanner.html>

Input:

Question 1. StudentIO Class

```
import java.util.Scanner;

public class StudentIO {

    public static void main(String[] args) {

        int i;
        int numStudents;
        int age;
        float gpa;
        int id;
        int year;
        float numCredits;
        float totalCredits;

        Scanner scnr = new Scanner(System.in);

        System.out.println("Number of students: ");
        numStudents = scnr.nextInt();
        System.out.println("");

        for ( i = 0; i < numStudents; i = i + 1 ) {
            System.out.println("Enter Student Number " + (i+1) + "
Info:");

            System.out.println("");
            System.out.println("Age: ");
            age = scnr.nextInt();

            System.out.println("GPA: ");
            gpa = scnr.nextFloat();

            System.out.println("ID: ");
            id = scnr.nextInt();
```

```

        System.out.println("Year: ");
        year = scnr.nextInt();

        System.out.println("Credits taken so far: ");
        numCredits = scnr.nextFloat();

        System.out.println("Total credits required: ");
        totalCredits = scnr.nextFloat();
        System.out.println("");

        System.out.println("Age: " + age);
        System.out.println("GPA: " + gpa);
        System.out.println("ID: " + id);
        System.out.println("Year: " + year);
        System.out.println("Credits completed: " + numCredits);
        System.out.println("Total credits required: " +
totalCredits);
        System.out.println("Credits remaining: " + (totalCredits-
numCredits));
        System.out.println((i+1) + " completed");
        System.out.println("");
    }

    scnr.close();

    System.out.println("Report completed.");
}
}

```

Output :

Note: Could not format output in text properly, image below

```

2. Java provides dialog boxes for input/output purposes. Use *JOptionPane* class under *javax.swing*. *JOptionPane* has methods *showInputDialog* and *showMessageDialog*. Repeat the first question without using *System.out.println* and *Scanner*. You can refer to *JOptionPane* documentation:

<https://docs.oracle.com/en/java/javase/11/docs/api/java.desktop/javax/swing/JOptionPane.html>

First import *javax.swing*. Use *showInputDialog* method to read input. It returns a *String* so convert this *String* to *int* or *float* by using *Integer.parseInt* or *Float.parseFloat*. Use *showMessageDialog* method to show the output. First create the output *String* and use it as a parameter for this method.

Input:

Question 2. StudentIO2 Class

```
import javax.swing.*;

public class StudentIO2 {

    public static void main(String[] args) {

        int i;
        int numStudents;
        int age;
        float gpa;
        int id;
        int year;
        float numCredits;
        float totalCredits;

        numStudents =
Integer.parseInt(JOptionPane.showInputDialog("Number of students: "));

        for ( i = 0; i < numStudents; i = i + 1 ) {

            String input_message = "Enter Student Number " + (i+1) + "
Info:";

            JOptionPane.showMessageDialog(null, input_message);

            age = Integer.parseInt(JOptionPane.showInputDialog("Age:
"));

            gpa = Float.parseFloat(JOptionPane.showInputDialog("GPA:
"));

            id = Integer.parseInt(JOptionPane.showInputDialog("ID:
"));
```

```

        year = Integer.parseInt(JOptionPane.showInputDialog("Year:
"));

        numCredits =
Float.parseFloat(JOptionPane.showInputDialog("Credits taken so far:
"));

        totalCredits =
Float.parseFloat(JOptionPane.showInputDialog("Total credits required:
"));

        String output = "Age : " + age + "\nGPA: " + gpa + "\nID:
" + id + "\nYear: " + year +
        "\nCredits completed: " + numCredits + "\nTotal
credits required: " + totalCredits +
        "\nCredits remaining: " + (totalCredits-
numCredits) + "\n" + (i+1) + " completed.";
        JOptionPane.showMessageDialog(null, output);
    }

    JOptionPane.showMessageDialog(null, "Report completed.");

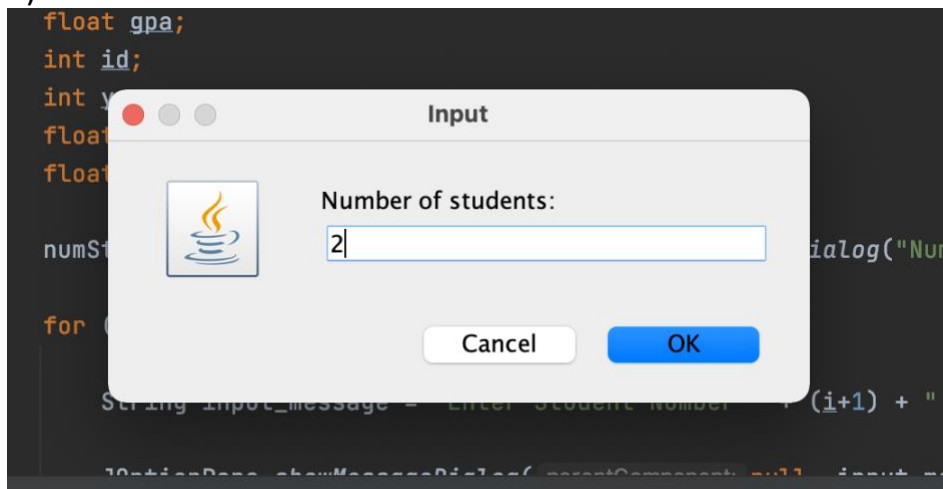

}
}

```

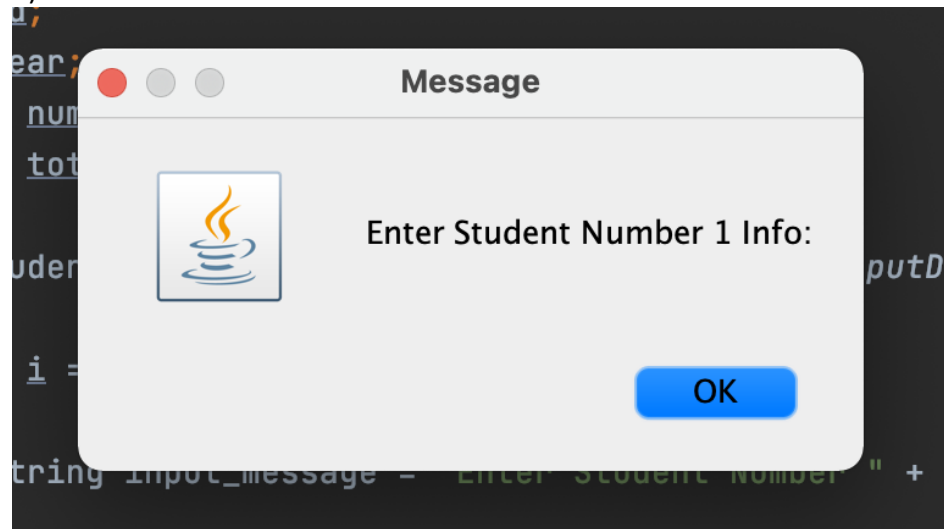

Output (Example with 1 Student):

Note: Only way to show output is with screenshots

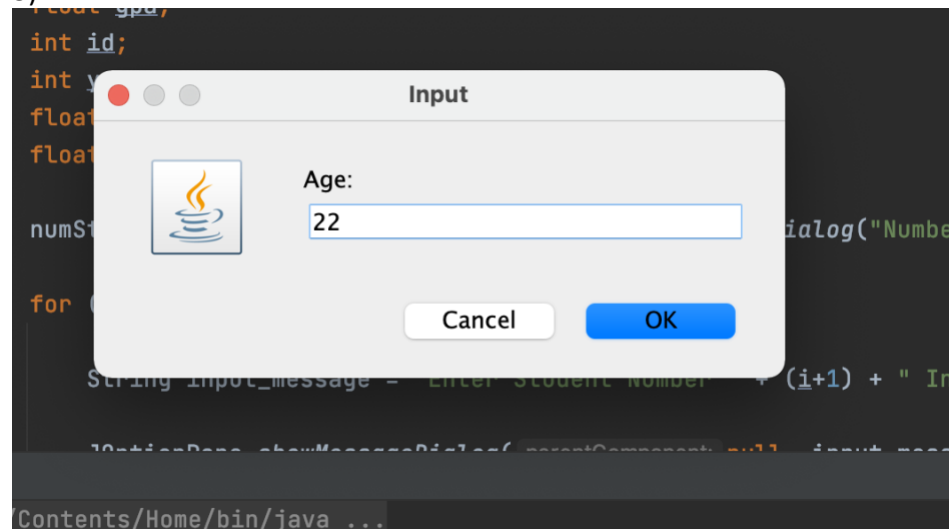

1)

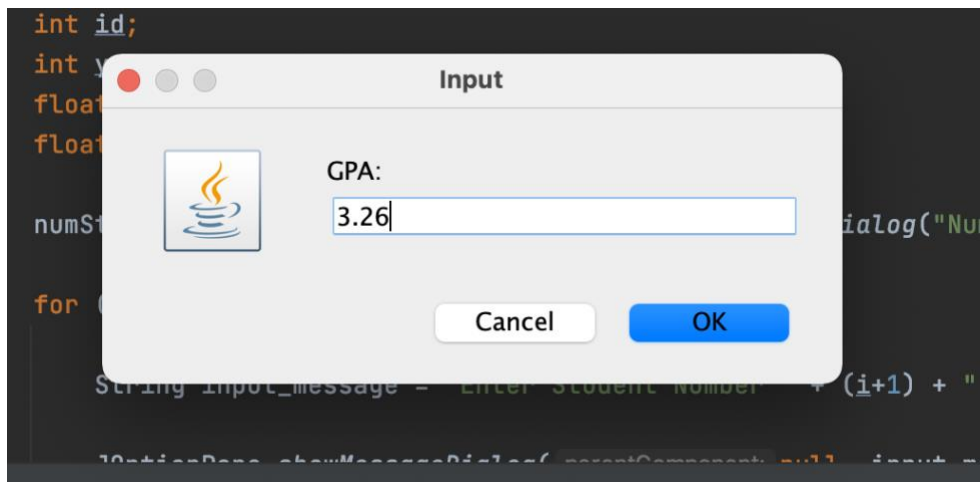

2)

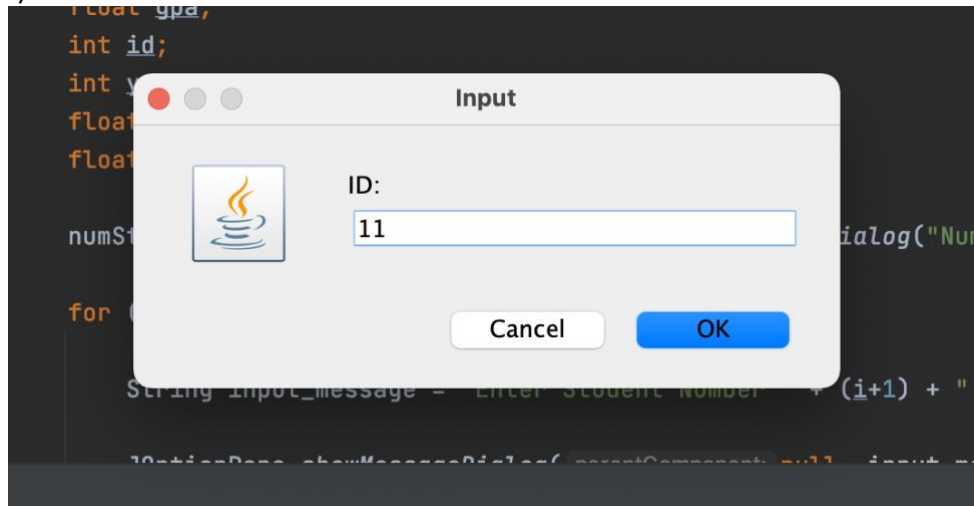

3)

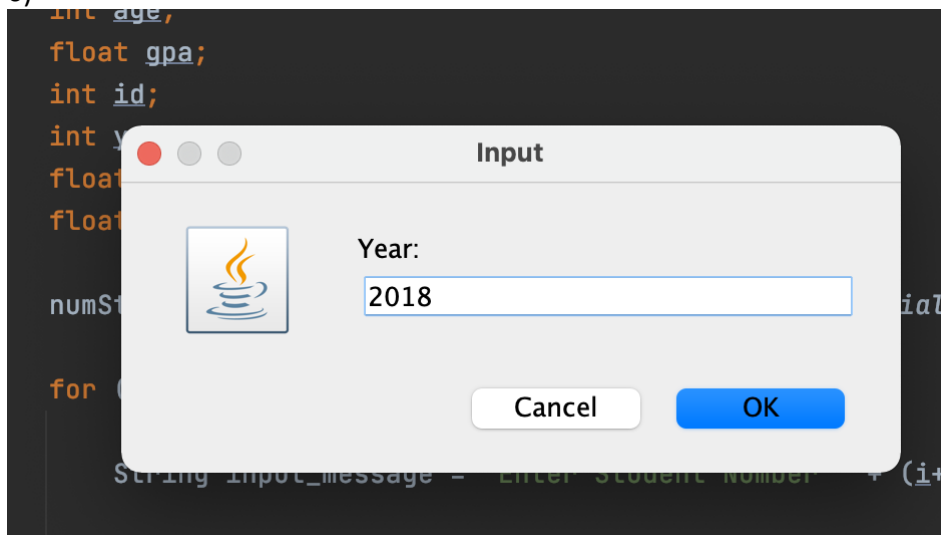

4)

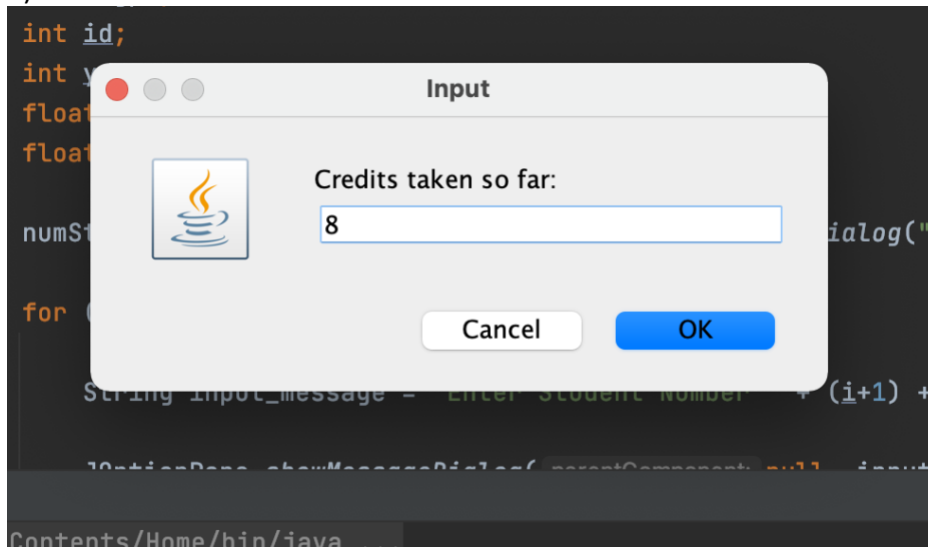

5)

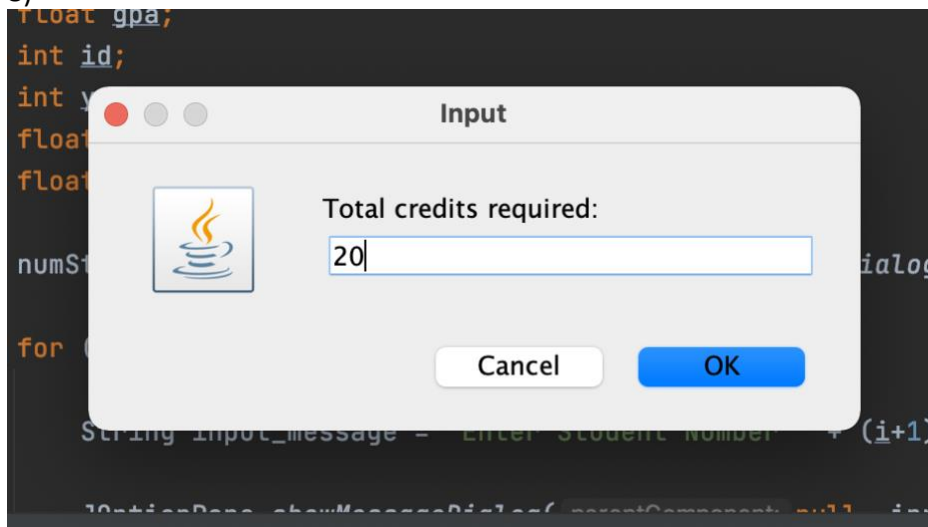

6)

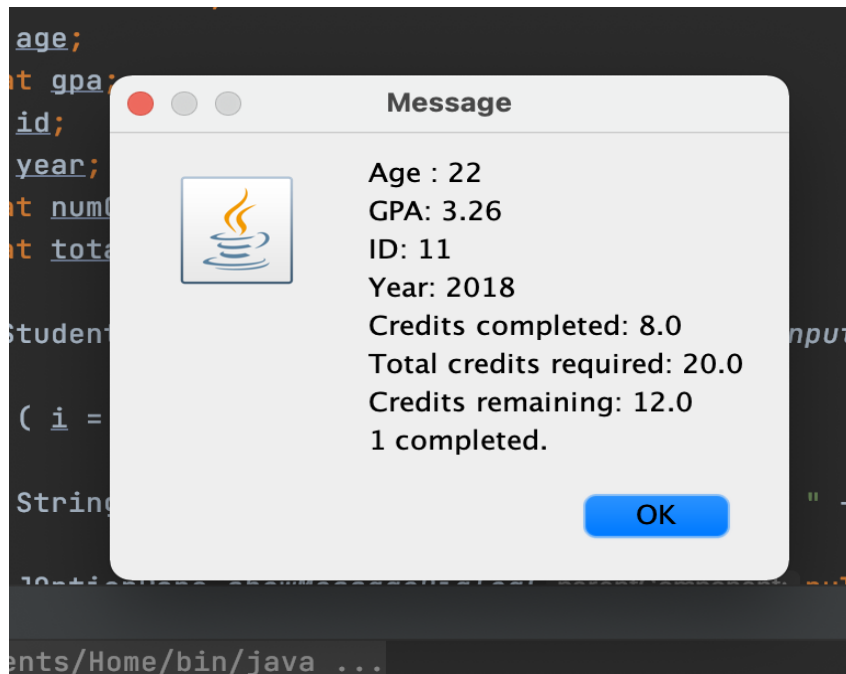

7)

8)

9)

10)
Repeat 2-9 for additional students

11)
